

**Department of Civil Engineering**  
**Motilal Nehru National Institute of Technology Allahabad**

TEQIP-II Sponsored Short Term Course on  
Bio-Inspired and Geospatial Techniques (BIOGEOS), Feb. 27- March 03, 2015

**Report of Outcome of the BIOGEOS**

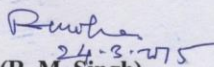

**Objective:** This course provide in-depth understanding of approaches for solving Engineering problems using various Bio-Inspired and Geospatial Techniques. Course enabled the participants to understand fundamentals and enrich their knowledge about the widely used and emerging software. Practical exposures to the techniques is also given to the participants through Laboratory Sessions.

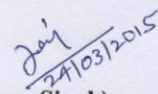

**Activity:** Course was inaugurated on Feb. 27, 2015 at 12:45 PM in GS-6. Twenty Six Hours of expert lectures were conducted from Feb. 27, 2015 to March, 03, 2015.

**Report:** 40 Nos. of total participants from different academic Institutes attended the course. 11 Nos. of experts have delivered expert lectures.

**Outcome:** Course equipped the participants with vast exposure to different Bio-Inspired and Geospatial Techniques like ANN, Fuzzy Logic, Particle Swarm Optimization (PSO), GIS, Remote Sensing, and hands on experience on different software. So that they will be able to utilize the acquired knowledge in their research and real word problem solving like design optimization, road network analysis, land-use planning, change detection in urban areas etc. This will help them to improve their teaching and research capabilities and professional career.

**Future Action:** Same type of courses may be planned in future also with more emphasis on real world problem solving based on integration on these Bio-Inspired and Geospatial Techniques.
