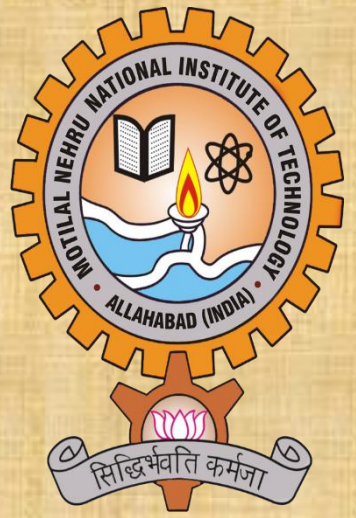
Motilal Nehru National Institute of Technology Allahabad, Prayagraj
Uttar Pradesh, India- 211004



Faculty Expertise

VISION

To attain a distinct identity for the Institute through technology innovation, knowledge creation and dissemination for the benefit of the society.

MISSION

- To nurture an eco system for continuous enhancement of value based teaching and learning process in the emerging areas of technology.
- To train quality human and knowledge resources in the service of society.
- To develop sustainable products and technologies.

Motilal Nehru National Institute of Technology Allahabad

Prayagraj – 211004

INSTITUTE DEPARTMENTS

1. Department of Applied Mechanics
2. Department of Biotechnology
3. Department of Chemical Engineering
4. Department of Chemistry
5. Department of Civil Engineering
6. Department of Computer Science & Engineering
7. Department of Electronics & Communication Engineering
8. Department of Electrical Engineering
9. Department of Humanities and Social Sciences
10. GIS Cell
11. Department of Mathematics
12. Department of Mechanical Engineering
13. Department of Physics
14. School of Management Studies

Department of Applied Mechanics

Dr. Anuj Jain

Ph.D., IIT Roorkee, India

Professor (HAG), Department of Applied Mechanics

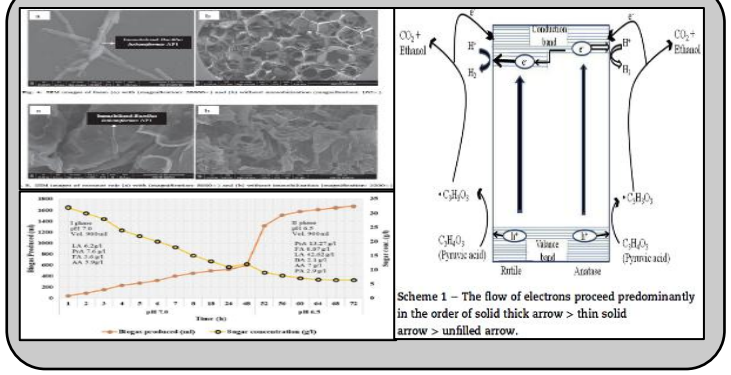
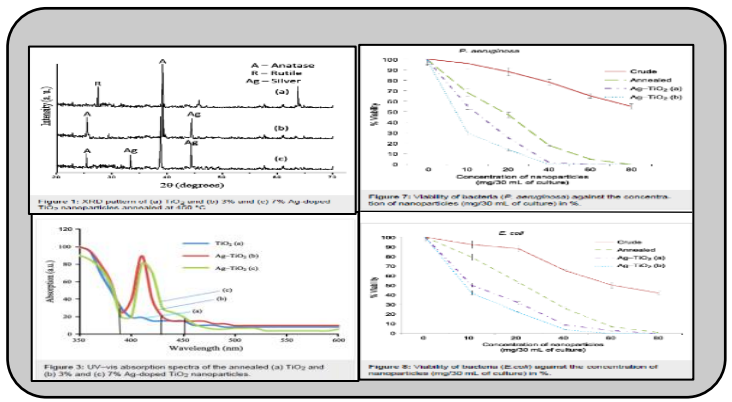
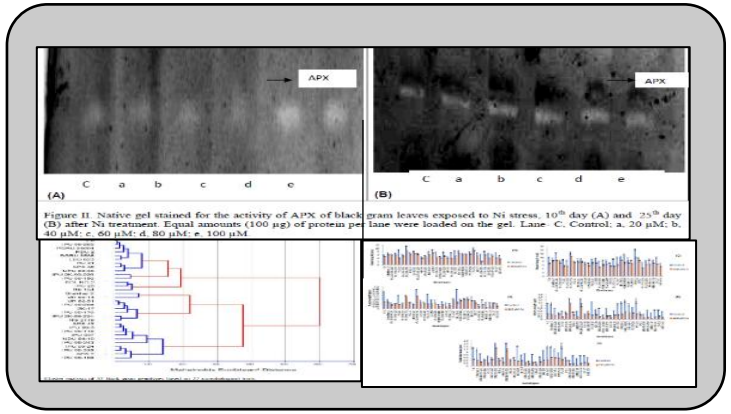


Scheme 1 – The flow of electrons proceed predominantly in the order of solid thick arrow > thin solid arrow > unfilled arrow.





Dr. Nand Kumar Singh

Ph.D. Indian Institute of Technology Roorkee, India

Associate Professor, Department of Biotechnology

Phone No. 91-532-227-1236, 91-9704049630, Email: nksingh@mnnit.ac.in; http://www.mnnit.ac.in

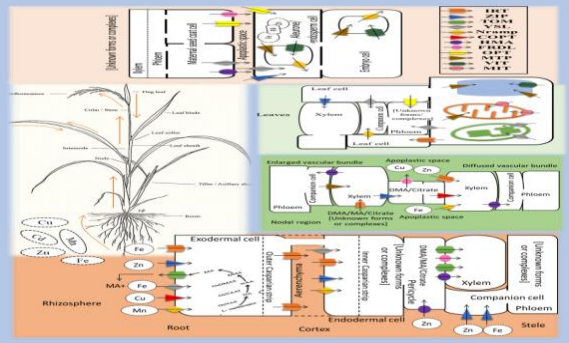
Research /Focus area:

- Agricultural biotechnology : Biofortification.
- Functional and applied genomics: Novel Gene mapping.
- Abiotic stress in plant: Temperature and drought tolerance.
- Bio prospecting of herbal extract and microalgae:Health care & value-added products.

Application 1

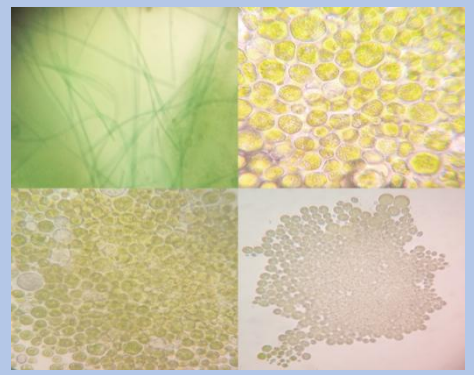
- ✓ Genome mapping & identification of genes.
- ✓ Bio fortification of Fe and Zn in crop plant.
- ✓ Nutritional quality improvement in crop plant.

Application 2



- ✓ Development climate resilient crop plant.
- ✓ Study the gene families contributing in yield and micronutrient uptake in plants.
- ✓ Nanoparticles mediated biotic and abiotic management.

Application 3



- ✓ Nutraceutical applications of microalgae.
- ✓ Use of herbal extract for health care applications..
- ✓ Plant Tissue culture.

Dr. Vishnu Agarwal

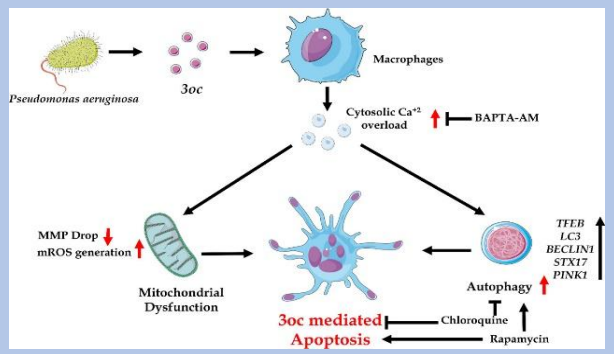
Ph.D. IIT Roorkee, India

Associate Professor, Department of Biotechnology

0532-227-1235, vishnua@mnnit.ac.in , http://www.mnnit.ac.in

Research Area:

- Biofilms, Quorum Sensing, Infections and Therapy
- Study of cell death and response in presence pathogens and molecules
- Immuno-modulatory activity of herbal formulations and Drugs



N-(3-oxododecanoyl) homoserine lactone induces calcium signaling-dependent crosstalk between autophagy and apoptosis in human macrophages

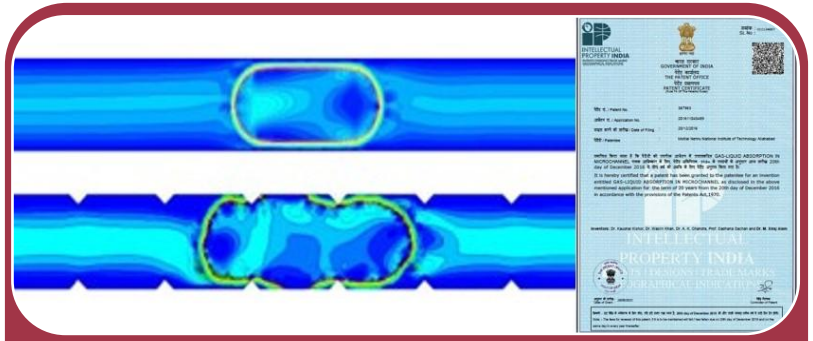
Research Area/Focus 1:	Modelling and Simulation of Microfluidic Devices
Research Area/Focus 2:	Chemical Reactor Analysis and Design: Micro-Structured Reactor (MSR), Catalytic Application of hybrid materials for wastewater treatment
Research Area/Focus 3:	Convective Heat Transfer: Design of Micro- and Macro- heat exchange devices with and without of Nanofluids.

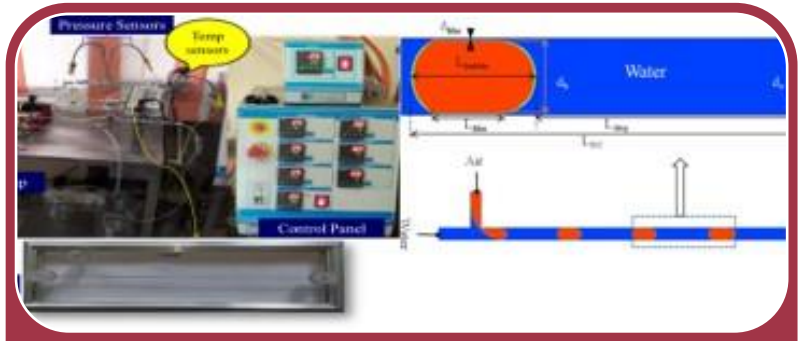


Application 1:

Hydrodynamics in Enhanced Microchannel

Patent (367963) : Gas-Liquid Absorption in Microchannel

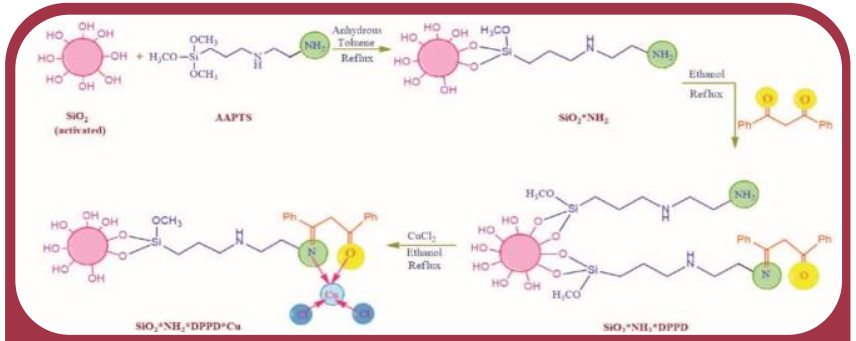
Chem. Eng. Technol. 2022, 45, No. 3, 1–9.



Application 2:

Micro-Reactor & Slug formation in MSR

Chemical Papers (2018) 72:2921–2932



Application 3:

Cu (II)-hybrid synthesis for Wastewater treatment

Chem. Biochem. Eng. Q., 35 (3) 225–250 (2021)

BROAD DESCRIPTION OF THE BANDWIDTH/AREA OF RESEARCH

Dr. Sushil Kumar

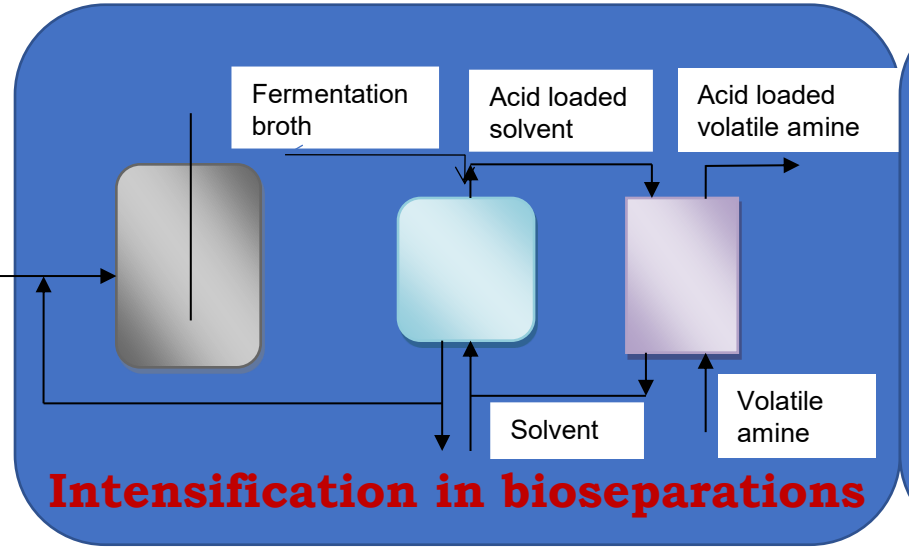
Associate Professor, Department of Chemical Engineering

B.Tech. from HBTI Kanpur, M.Tech. from IIT Kapur and PhD from BITS Pilani

Mobile- 9455421398; sushilk@mnnit.ac.in , http://www.mnnit.ac.in

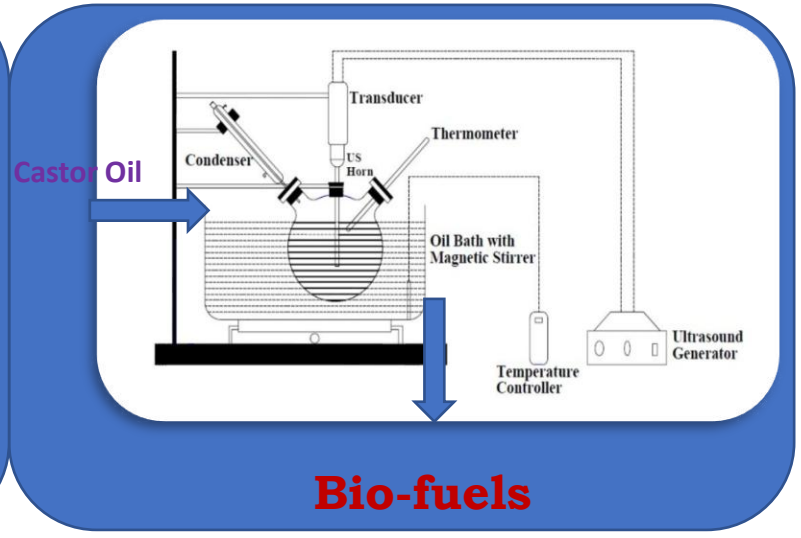
Research Areas/Focus:

1. **Process Intensification:** Intensification in bio-separations using Reactive Extraction; Microwave/Ultra-sonication assisted Extraction.
2. **Wastewater Treatment:** Bioremediation; Electro-coagulation and electrochemical oxidation.
3. **Bio-fuels and Biopolymers:** Production of bio-fuels and bio-polymeric nano-materials



Intensification in bioseparations

Wastewater Treatment



Bio-fuels

Dr. Ashish N. Sawarkar

Assistant Professor, Department of Chemical Engineering

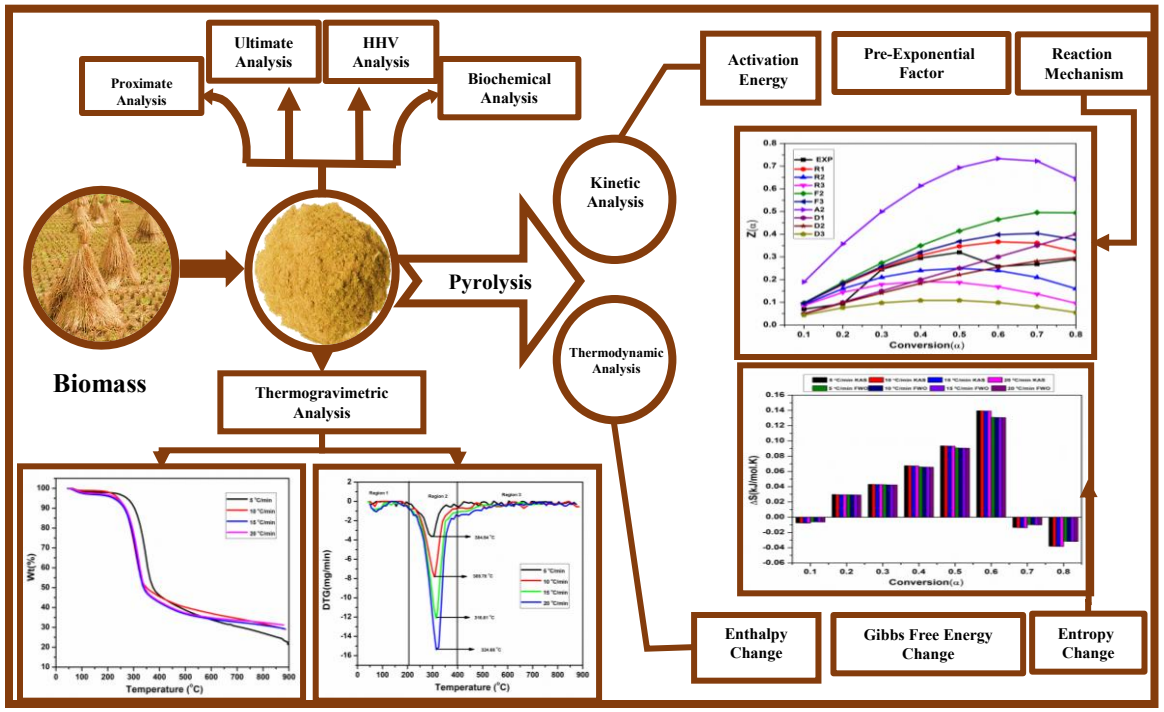
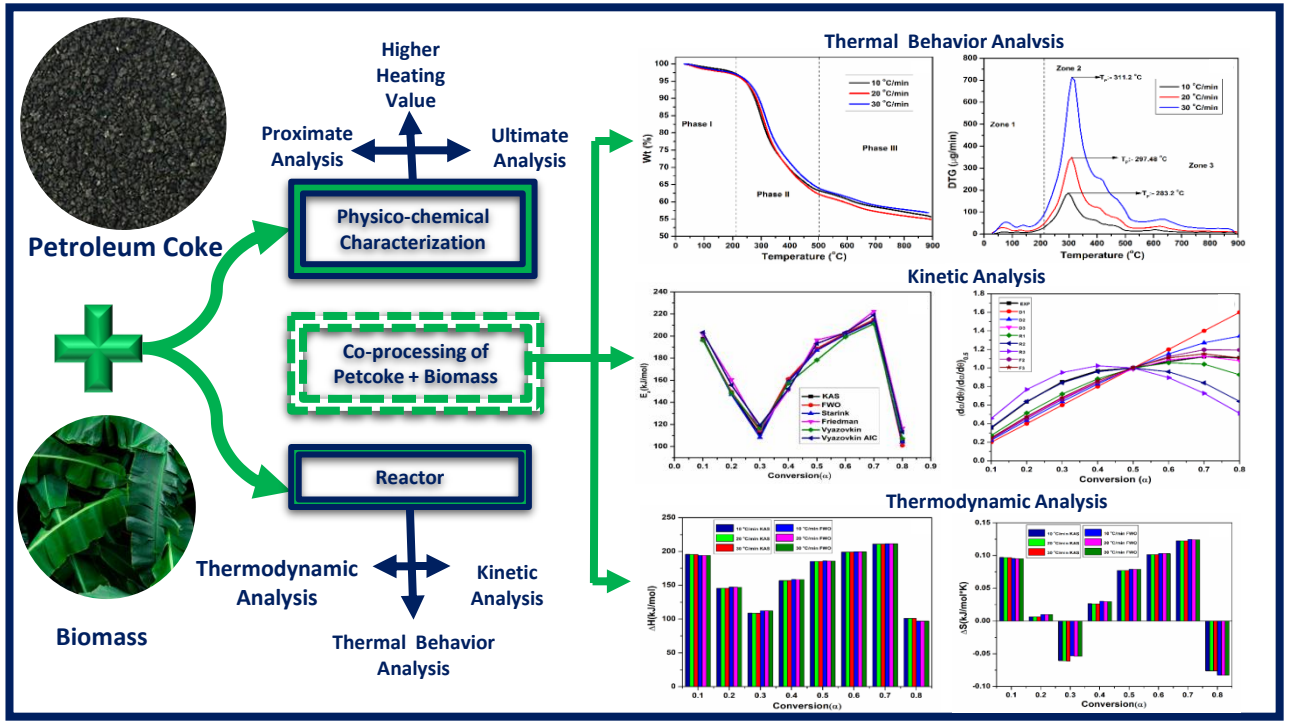
Research Areas/Focus:

1. **Biomass Utilization:** Pyrolysis; Kinetic modeling; Thermodynamic analysis
2. **Biochar:** Production, Modification & Characterization; Applications
3. **Valorization of heavy feedstocks in petroleum refineries:** Gasification; Co-processing with agro-residues; Hydrogen-based economy



Pyrolysis and co-pyrolysis of biomass



Biochar production **Valorization of heavy feeds in petroleum refineries**

Dr. Suantak Kamsonlian

Assistant Professor, Department of Chemical Engineering

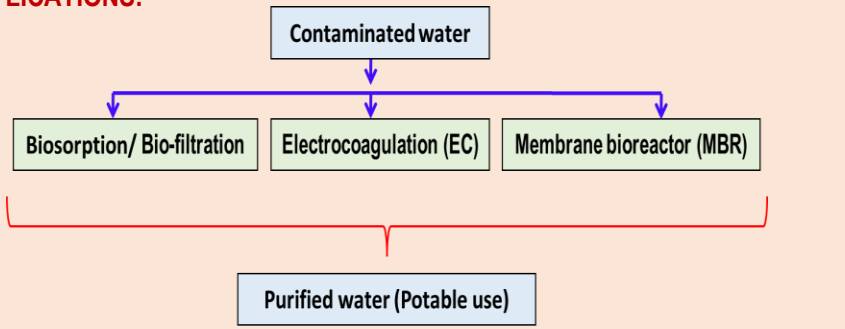
E-mail: suantakk@mnnit.ac.in , Telephone: 05322271589(O)/ 07565942699(M)

RESEARCH AREA/ FOCUS:

1) Water/ Wastewater Treatment

Purifications of contaminated water using various treatment methods for the purpose of potable use or drinking water as per the norms

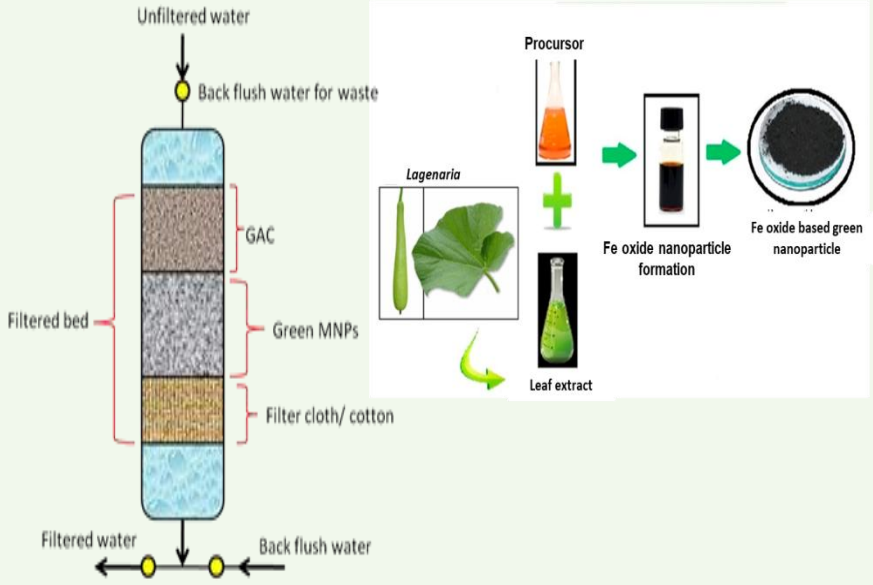
APPLICATIONS:



2) Bio-chemical and Bio-nano-materials

Synthesis of bio-nanopartices from medicinal herbs for therapeutic applications and biosorption of water pollutants

APPLICATIONS:



3) Electrochemical Process

Production of bio-electricity using municipal wastewater and removal of organic compounds

APPLICATIONS:

Algorithm 1 MODE-HBM

Input:
$f_m, m = 1, 2, ...M$. MOP with M objectives
S^D = Search space of D decision variables
ITR = Maximum Number of Iterations
Output:
New population
Begin Procedure
for i = 1 to N
Initialize each solution α_i randomly with in respective search space range.
Apply nondominated sorting and assign ranks to solutions according to their pareto front number
Apply Homeostasis mutation: $\gamma_{i,G} = \alpha_{best,G} + \delta_1 \cdot (\alpha_{r_1^i,G} * Hv - \alpha_{r_2^i,G} * Hv)$
Apply crossover
Evaluate each solutions fitness for $f_m(\alpha_i)$, $m = 1, 2, ..., M$
Apply selection and first keep good rank solutions, in case of tie solution choose solution with higher crowding distance
End for
End Procedure

Proposed a Multi-objective Differential Evolutional (DE) algorithm to software cost estimation.

- **Electric Vehicles, Power conditioning units for EVs, superfast charging systems, Solar PV Vehicles, FC Vehicles**
- **Grid Independent Electric Vehicle Driving Systems, Solar PV Reconfiguration**

BROAD DESCRIPTION OF THE BANDWIDTH/AREA OF RESEARCH

The fuel cells are clean and efficient power sources and has been gaining popularity through out the world . The fuel cell devices have low output voltage and hence suitable DC-DC converter is essential to interface the FC system with practical loads. Various isolated and non isolated power converters are under study and continuous research is going on this topic.

The electric vehicles are predominately entering the transportation market near about 5 million Evs have been sold through about the world as on 2021. The Evs are noise less and pollution free. Lots of research is conducted on the development of EV systems. The EV system need power electronic converters to integrate battery with the motor and also need for charging the batteries. The power conditioning systems for EV is an important area of research for a power electronics engineer. There is a much need of efforts in developing the efficient and economical DC-DC power converters, Inverters and Rectifiers for Evs. Further, The Ev systems need a charging systems with less time, for that one need to focus on superfast charging schemes. Grid independent Evs like solar and FC vehicles are most important and need much attention by the researchers. The solar PV reconfiguration is an most important area to make the system efficient.

ASIC Implementation of Area-Efficient, High-Throughput 2-D IIR Filter Using Distributed Arithmetic

Prashant Kumar[1] · Prabhat Chandra Shrivastava[1] · Manish Tiwari[1] · Amit Dhawan[1]

Received: 11 April 2017 / Revised: 20 October 2017 / Accepted: 23 October 2017 /
Published online: 7 November 2017

Abstract This paper presents a generalized formulation of 2-D IIR filters using distributed arithmetic (DA) techniques. Based on the DA formulation, two efficient structures for 2-D IIR filters are proposed. Hardware-based look-up table (HLUT) is used in the internal blocks, so the proposed structures are reconfigurable. A novel approach of HLUT sharing, among the various internal blocks of structure, is used to reduce the requirement of adders and memory elements. For higher-order 2-D IIR filter, the complexity of HLUT is reduced by dividing the internal block of 2-D IIR filter into parallel and small block for DA decomposition. Such decomposition for higher-order 2-D IIR filters offers high degree of modularity, parallelism and regularity in building blocks, thereby achieving easier hardware and software implementation. In order to reduce combinational delay in the critical path, pipelining is used in the structures. Since proposed structures are multiplier-less and require lesser number of delays and adders, a significant improvement in chip area, power consumption and throughput can be obtained. Finally with the help of ASIC synthesis results, a comparative analysis is made and the results show that for the filter order 15, the proposed structures offer 69 and 59% reduction in ADP and 79 and 76% reduction in ADP than the earlier reported results for separable and non-separable structures, respectively.

An LMI approach to non-fragile robust optimal guaranteed cost control of uncertain 2-D discrete systems with both state and input delays

SAGE

Abstract

In this paper, we present a solution to the problem of non-fragile robust optimal guaranteed cost control for a class of uncertain two-dimensional (2-D) discrete systems described by the general model (GM) subject to both state and input delays. The parameter uncertainties are assumed norm-bounded. A linear matrix inequality (LMI)-based sufficient condition for the existence of non-fragile robust guaranteed cost controller is established. Furthermore, a convex optimization problem with LMI constraints is proposed to select a non-fragile robust optimal guaranteed cost controller stabilizing the uncertain 2-D discrete system with both state and input delays as well as achieving the least guaranteed cost for the resulting closed-loop system. The effectiveness of the proposed method is demonstrated with an illustrative example.

Keywords

2-D discrete systems, guaranteed cost control, linear matrix inequality, Lyapunov methods, robust stability, state-delayed systems, uncertain systems

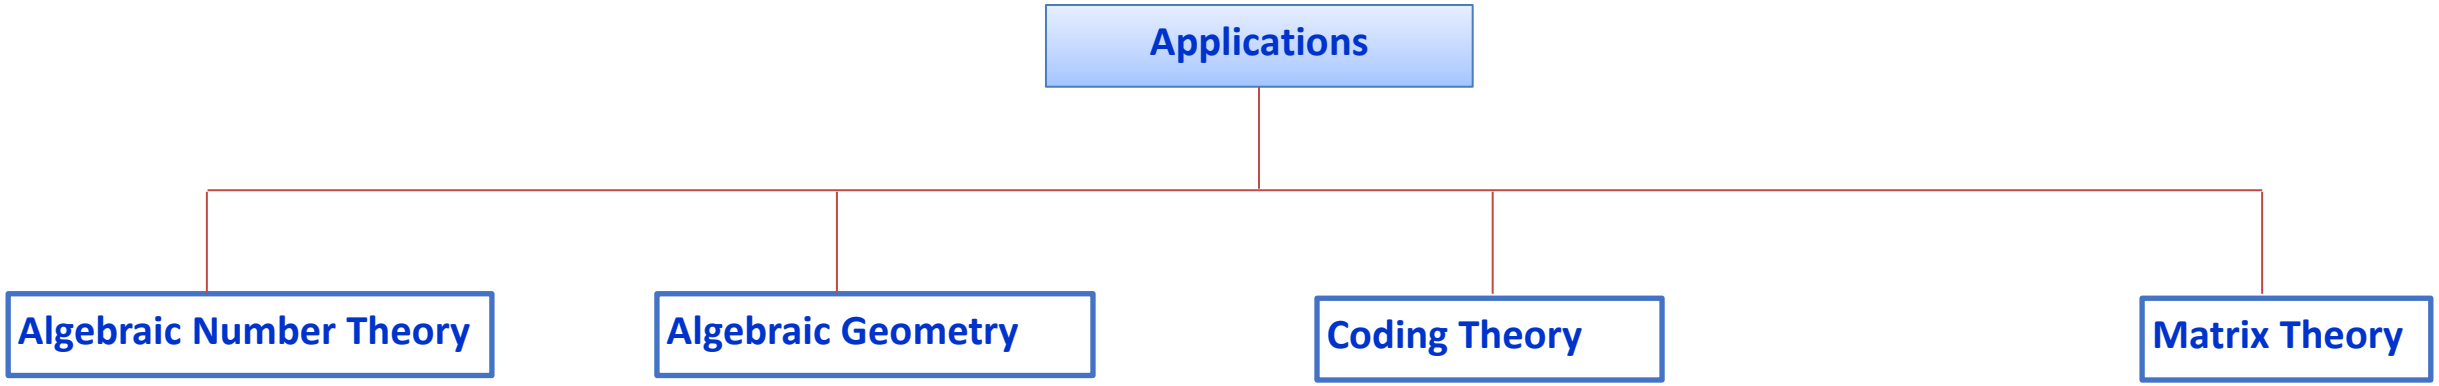
- **Research Area/Focus 1:** Commutative Algebra.
- **Research Area/Focus 2:** Representation Theory
- **Research Area/Focus 3:** Cryptography



1. Commutative algebra is a part of algebraic geometry to study properties of geometric objects and study of the rings occurring in algebraic number theory as the important class of rings of algebraic integers (Dedekind rings)
2. Representation theory reduces problems in abstract algebra to problems in linear algebra.
3. Algebra and number theory are used in cryptography for secure communication.

A schematic description of the directions of the velocity vector components and shock wave (Acta Astronautica [2019])

Applications

Application of Shock Waves

- In Industries
- In Medical Sciences
- To Design Space Vehicle
- To reduce drag force in supersonic flight
- In description of Star and Planet formation
- In Engineering Problem.

Future Application of Shock Waves

- Now a day astronomer plan is to do mining in space to extract Water, Iron, Uranium from rocky planet (Planet on which we can land) these would not be happen without shock waves.

Achievements

- Listed name in 2% Worlds Scientist/Researcher:

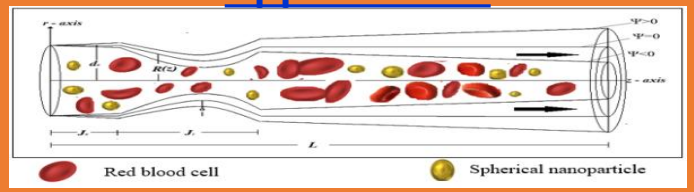
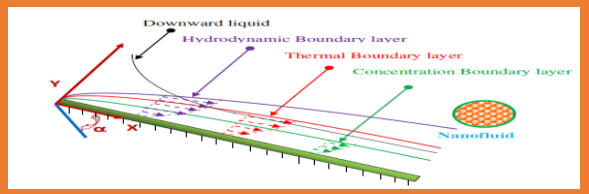
*As of 23/03/2023

Application-1



- The mathematical modelling of hydro-magnetic nano-hemodynamics have drug delivery applications for cardiovascular treatments.
- The nature of blood is discussed mathematically by considering it as viscous nanofluid.
- The simulations are relevant to the diffusion of nano-drugs in magnetic targeted treatment of stenosed arterial diseases

Application-2



- The first and second laws of thermodynamics are employed in order to study hydrodynamics along with heat and mass transfer of gravity-driven Ostwald-de-Waele power-law liquid film suspending with nanoparticles along an inclined plate.
- Nanofluids are uniformly stable and suspended in a liquid for heat transfer intensification, in industrial sectors including power generation, thermal therapy for cancer treatment, chemical sectors, ventilation etc.

Achievements

- **The Early Career Research (ECR) Award**, by Science and Engineering Research Board (**SERB**), 2018.
- **Research Award: 2014-16 by University Grants Commission, India.**

RESEARCH INTEREST:

- **Applied Functional Analysis**
- **Variational Inequality Problem (VIP), Equilibrium Problems (EP)**
- **Fixed Point Problems (FPP)**

OBJECTIVES: **(a) Iterative methods for common solution of VIP, EP, and their generalizations.**

(b) Study of VIP and EP through a dynamical system with applications.

(c) Split system of variational inequalities with application to traffic analysis.

(d) Iterative methods in fixed-point theory in various abstract spaces .

(e) Introduction of the weak sharp solution of the split variational inequalities .

$$x_0 \in H_1,$$

$$u_n = T_{r_n}^{F_1}(x_n + \gamma A^*(T_{r_n}^{F_2} - I)Ax_n),$$

$$y_n = \beta_n x_n + (1-\beta_n)S_N^n S_{N-1}^n \cdots S_1^n u_n,$$

$$x_{n+1} = \alpha_n \eta f(x_n) + (I - \alpha_n \mu D)y_n, n \geq 1,$$

- **A viscosity iterative method has been introduced to capture common solutions of the equilibrium problem and fixed point problem. Strong convergence results are studied.**
- **Inertial iterative methods has been introduced for the solution of the split variational inclusion and fixed point problem. Weak convergence has been studied.**
- **Traffic analysis problem of two railway networks has been converted to split system of variational inequality. Weaksharpness and finite convergence analysis has been studied.**

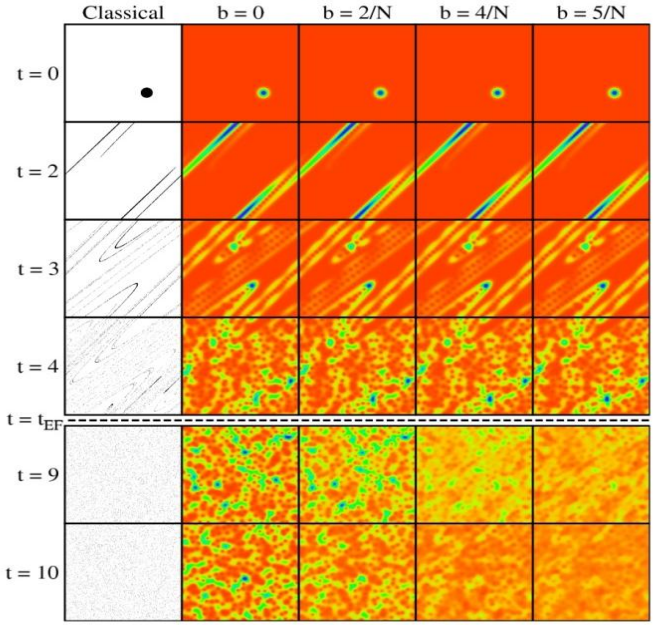
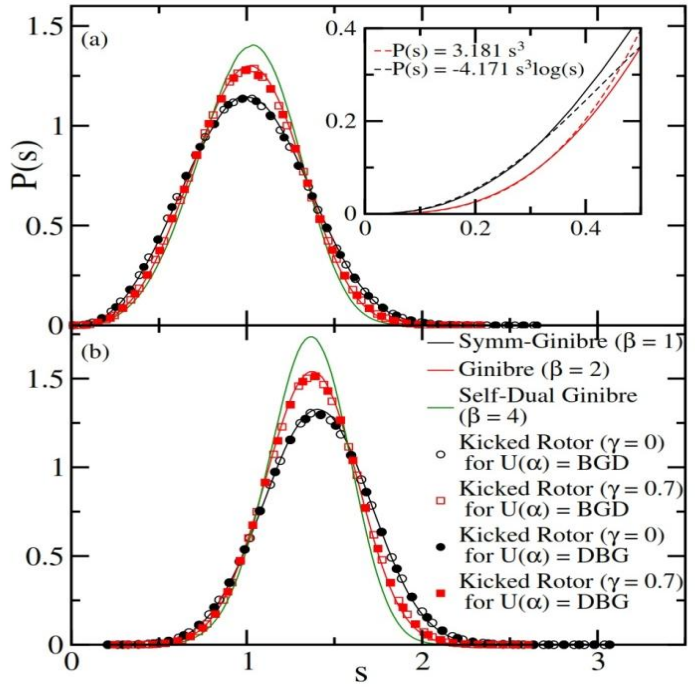
Research Interests

Quantum chaos, Random matrix theory and its applications, Embedded ensembles of random matrices, Dissipative/open quantum systems, Nonlinear dynamics and complex systems, Quantum entanglement, Out-of-time-order-correlators. Entanglement entropy and operator entanglement.



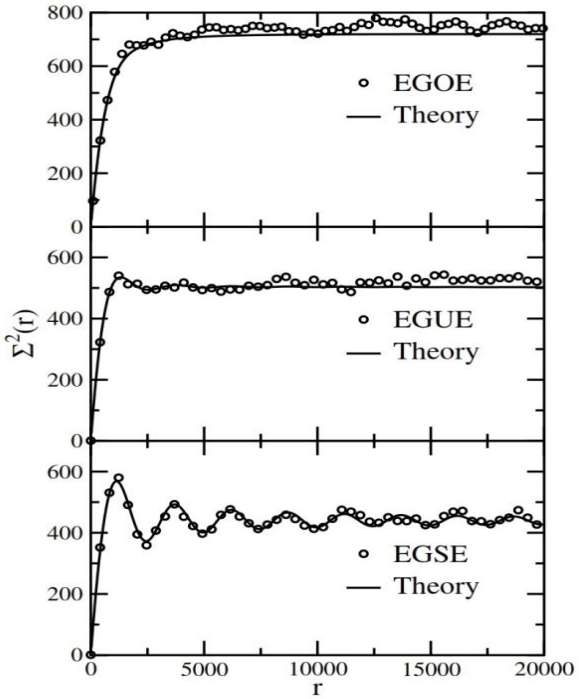
Phase-space representations of initially localized time-evolving states for a weakly coupled bipartite system consist of strongly chaotic kicked rotors as subsystems. For such systems, the Ehrenfest time separates regime of intra-subsystem and inter-subsystem scrambling. The scrambling is intra-subsystem upto the Ehrenfest time, and therefore is independent of coupling (b). After the Ehrenfest time, it is of inter-subsystem type and therefore depends on coupling.

– Phys. Rev. B, **101**, 121108(R) (2020).



Nearest neighbour and next nearest neighbour spacing distribution are shown in (a) and (b) respectively for symm-Ginibre ($\beta = 1$), Ginibre ($\beta = 2$) and self-dual Ginibre ($\beta = 4$) ensembles of random matrices. Also shown in the plots, their excellent agreement with dissipative kicked rotors corresponding to time-reversal invariant ($\beta = 1$) and time reversal ($\beta = 2$) case.

– Europhys. Lett., **127**, 30004 (2019).



Number variance static for embedded ensembles of two non-interacting particle systems. The sub-systems are represented by GOE, GUE and GSE of random matrices in top, middle and bottom plot respectively. The saturation in all plots represents the suppression of fluctuations with large correlation lengths.

– Phys. Rev. E, **93**, 052225 (2016).

Systematic literature review
Environment sustainability
Green IS adoption

ABSTRACT

Green Information Systems (Green IS) emerged as a crucial area for research to reduce organizations/society's carbon footprints and consequently, to achieve environment sustainability. This research paper provides an extensive systematic literature review in Green IS area to facilitate advance research in the area. The aim of the paper is to provide basic understanding of Green IS and to highlight the significant research conducted earlier in this area. Classification approach adopted to conduct the study, and the research area categorized under five segments namely: Green IS concept, innovation and technology, impact of green initiatives, measures and policies, and global context. These five categories were further divided into subcategories to provide in-depth and crystal clear review of literature. Accessible research articles, book chapters and reports from top ten databases Emerald, Science Direct, EBSCOhost, ACM digital Library, IEEE, JSTOR, ProQuest, Sage, Wiley online and Springer link were reviewed. Research propositions are provided for future significant research in this area.

Use intention

ABSTRACT

Mobile payment solutions (MPSs) are experiencing growth and popularity across the globe because of their convenience and other benefits in performing transactions. However, despite these circumstances and the benefits offered, MPSs are still suffering from challenging situations related to their adoption and usage. The main challenge MPSs have faced in retail is because of the presence of consumer resistance toward their use. The present study investigates the different consumer barriers toward the intentions to use and recommend MPSs. The current study examines the adoption and usage of MPSs through the lens of innovation resistance. We developed the research model based on the innovation resistance theory (IRT) and tested it using a large cross-sectional study with 1256 MPS users. The study findings suggest that usage, risk, and value barriers are negatively associated with intentions to use MPSs. On the other hand, only usage and value barriers have a negative association with users' intention to recommend MPSs. In comparison, the tradition and image barriers did not share any association with the user intentions. The study offers different implications for practitioners and researchers.

InsurTech

ABSTRACT

Using the technology–organization–environment framework, this study examines the factors influencing the behavioral intention of insurance industry employees to adopt artificial intelligence (AI)-enabled applications. With two factors from the technology dimension and three factors each from the organization and environment dimensions, we collected data from 358 employees in the Indian insurance industry. We use structural equation modeling to test what variables significantly impact employees' behavioral intentions to adopt AI in the insurance industry. While all technological (relative advantage and complexity) and environmental (market dynamics, regulatory support, and competitive pressure) variables significantly predict behavioral intention, only top management support and financial readiness among the environmental variables indicate a significant association with the behavioral intention for AI adoption. Accordingly, technical competencies did not have a significant impact on behavioral intention.

Sailing through the COVID-19 pandemic: managing expatriates' psychological well-being and performance during natural crises

Chhaya Mani Tripathi and Tripti Singh

School of Management Studies, Motilal Nehru National Institute of Technology, Allahabad, India

Received 31 March 2021
Revised 14 July 2021
24 August 2021
Accepted 10 October 2021

Abstract

Purpose – The unprecedented challenges brought about by the coronavirus (COVID-19) pandemic affected people's lives worldwide. The purpose of this study is to propose a conceptual model to explain how natural crisis events, such as COVID-19, cause stress and influence the psychological well-being (PWB) and performance of expatriates.

Design/methodology/approach – The model presented in this conceptual paper is based on Bader and Berg's (2014) two-stage stress emergence and outcome model developed to study expatriates' performance in terrorism-endangered countries. The authors apply their model to natural crisis events and provide propositions to explain the postulated relationships.

Findings – The proposed model delineates the stressors that emerge from psychological and situational factors, and how they impact the PWB and performance of expatriates. The article emphasizes how resilience, social network, and support from the organization, supervisor, and family can help mitigate the adverse effects of stress on the PWB of expatriates. Furthermore, keeping in mind the prevailing situations due to COVID-19, the authors shed light on the indispensability of virtual collaboration in ameliorating expatriates' performance in challenging times.

Practical implications – Implications are discussed for organizations in devising plans and strategies to deal with unforeseen crisis events.

Originality/value – This study extends the expatriation literature to the events of natural crisis by incorporating the stress emergence-outcome model. In doing so, the authors identify the factors relevant to natural crises and apply them to understand how they could impact expatriates in such times.

Modelling the role of social media usage in improving users well-being: a social enhancement model perspective

Rahul Bodhi, Tripti Singh and Yatish Joshi

School of Management Studies, Motilal Nehru National Institute of Technology Allahabad, Prayagraj, India

Abstract

Purpose – Employees have gradually adopted social media sites and their applications that have been associated with enhanced communication and collaboration at the workplace. However, social technologies have both positive as well as negative consequences. The current study examines the impact of loneliness on employees' psychological well-being (PW); subsequently, the mediating role of social media use intensity (SMI) at the workplace. It also examines the moderating role of gender and management status of employees.

Design/methodology/approach – The present study conducted an online and offline survey using a cross-sectional design. Data were collected from 206 working professionals from the IT industry in India. Structural equation modelling was applied to analyse data.

Findings – Results revealed that employee loneliness is positively associated with SMI. Employee's SMI was positively associated with enhanced PW. Unexpectedly, employee loneliness is positively and significantly related to PW. However, the moderating roles of gender and management status of employees were not supported.

Practical implications – The current study can help managers, policymakers and organizations better understand the role of employee social media use in the workplace. Using the insights and understanding offered by the study, social media can be effectively utilized in the workplace. The study recommends that organizations may allow the use of social media at the workplace. Social media resources may also be helpful in improving employee communication and digital literacy.

Originality/value – The current study is a pioneer work and contributes to the literature by examining the relationship between loneliness, SMI and PW. This study has essential theoretical and managerial contributions.

Keywords Social enhancement model, Loneliness, Psychological well-being, Employee, Workplace, Social media

Paper type Research paper

1. Introduction

Social media have transformed the very nature of communication with rapid expansion and widespread application (Cao and Yu, 2019; Chang and Hsiao, 2014). Social media is defined as "a set of mobile and web-based platforms" that radically changed the way people interact, share information, express views, collaborate and build networks (Giannakis *et al.*, 2020; Ouirdi *et al.*, 2014; Ray *et al.*, 2021; Yadav and Rahman, 2018). Social media users stand at nearly 4.33 billion globally, and the penetration level is approximately 55% (Digital Report, 2021). A recent report is revealed that 41% of employees had adopted social media for work purposes globally (Digital Report, 2021). Social media are gradually becoming ubiquitous at the workplace (El Ouirdi *et al.*, 2015). van Zoonen *et al.* (2016) stated that social media applications and site usages for work and organizational purposes refer to the content shared related to work experience, and organizational or industry-related information.

Organizations and employees extensively use social media for work-related and non-work-related purposes (Zhang *et al.*, 2019a). In the recent past, most studies have focussed on the general use of social media, such as adolescents and young adults (e.g. Faelens *et al.*, 2021).

Abstract

Purpose – Viewed in the context of liberalization, privatization and globalization, the socio-economic and legal environment facing the unions have changed, throwing them into clutches of adversity and destitution. The purpose of this paper is to identify the reasons (i.e. antecedents) behind workers' participation in union activities (such as strikes, rallies, demonstrations) in today's scenario, and to understand how these participation tactics influence workers' performance (i.e. worker behavior effectiveness) at work.

Design/methodology/approach – A range of published sources is drawn on, including quantitative, survey based and qualitative, case-study and other evidence for building the conceptual review.

Findings – The investigation clearly indicates that contemporary challenges facing unions in the present scenario prompt industrial actions. Only specific and genuine grievances and justifiable demands motivate workers to form a strong emotional attachment to their unions and engage in union participation activities such as strike activity (Darlington, 2006; Bean and Stoney, 1986).

Originality/value – Contrary to the traditional view, which sights unions as detrimental to worker productivity, turnover, and attendance at work (via restrictive work rules, featherbedding and disruptive strikes or other adversarial tactics), the investigation, through extensive review of literature proposes that unions positively influence worker behavior at work. The model, however, requires empirical testing to validate the proposed relationships.

Abstract

The shifting market dynamics and harsh rivalry of the worldwide economy have augmented the role of brands to an incomparable level. Brand extension has emerged as a popular strategy in the marketing area. While it brings brands closer to success, it is also imperative and important to understand how consumers evaluate and presume similar or dissimilar extensions and what is the substantial influence of risk and subsistence of parent brand on extension success? Identifying and analysing such relationships could be helpful and important for personal care brands in India to gain an edge over competitors. Data were collected from 500 consumers who were proverbial with the brand extensions of Dettol in similar or dissimilar product categories. Regression analysis showed that though perceived fit and risk directly influence the success of brand extension, nevertheless on incorporating parent brand conviction as a moderator the relationships between perceived fit and brand extension success and risk and brand extension success are strengthened. Limitations and future scope have also been mentioned.

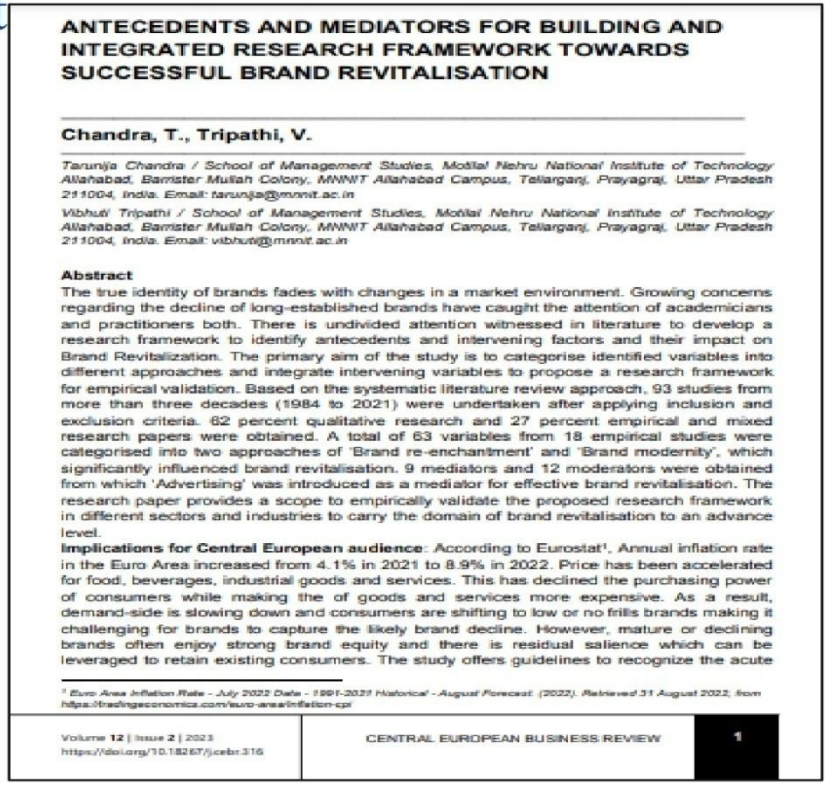
Vibhuti Tripathi[1]

Abstract

Amid rising concern about protecting environment and reducing carbon emission, marketers do not just need to advertise their product to inform and persuade the consumers, rather they are required to convince the consumers that their product is environment friendly and do not cause any harm to the environment. Celebrity Advertising has been very popular among the marketers, as these celebrities help to generate favourable attention towards the product. While choosing an endorser/celebrity, his/her credibility plays a crucial role in persuading and convincing consumers. The present paper attempts to assess the effect of celebrity's credibility on consumer's attitude towards advertisement, brand and purchase intention in the context of green advertising. The study was conducted with a 2x2 factorial design (high v/s low) (celebrity's credibility v/s corporation's credibility) with an advertisement of a hypothetical company producing environment friendly ACs called, Sora. Data were collected from 252 college students by randomly exposing them in small group, to four different advertisements. The results confirmed a significant impact of celebrity credibility on attitude towards green advertisement. However, it had no direct impact on attitude towards brand or intention to purchase green products. Moreover, the effect of celebrity credibility on purchase intention was reported to be mediated through attitude towards advertisement and attitude towards brand.



ANTECEDENTS AND MEDIATORS FOR BUILDING AND INTEGRATED RESEARCH FRAMEWORK TOWARDS SUCCESSFUL BRAND REVITALISATION

Chandra, T., Tripathi, V.

Abstract

The true identity of brands fades with changes in a market environment. Growing concerns regarding the decline of long-established brands have caught the attention of academicians and practitioners both. There is undivided attention witnessed in literature to develop a research framework to identify antecedents and intervening factors and their impact on Brand Revitalization. The primary aim of the study is to categorise identified variables into different approaches and integrate intervening variables to propose a research framework for empirical validation. Based on the systematic literature review approach, 93 studies from more than three decades (1984 to 2021) were undertaken after applying inclusion and exclusion criteria. 62 percent qualitative research and 27 percent empirical and mixed research papers were obtained. A total of 63 variables from 18 empirical studies were categorised into two approaches of 'Brand re-enchantment' and 'Brand modernity', which significantly influenced brand revitalisation. 9 mediators and 12 moderators were obtained from which 'Advertising' was introduced as a mediator for effective brand revitalisation. The research paper provides a scope to empirically validate the proposed research framework in different sectors and industries to carry the domain of brand revitalisation to an advance level.

Implications for Central European audience: According to Eurostat[1], Annual inflation rate in the Euro Area increased from 4.1% in 2021 to 8.9% in 2022. Price has been accelerated for food, beverages, industrial goods and services. This has declined the purchasing power of consumers while making the of goods and services more expensive. As a result, demand-side is slowing down and consumers are shifting to low or no frills brands making it challenging for brands to capture the likely brand decline. However, mature or declining brands often enjoy strong brand equity and there is residual salience which can be leveraged to retain existing consumers. The study offers guidelines to recognize the acute

ABSTRACT

The consumption pattern of people can be an efficient way to deal with the deteriorating situation of nature, which has adversely impacted human health and wellbeing. The current study investigates consumers' green purchase intention by examining psychological factors such as economic value, emotional value, and perceived marketplace influence. A total of 387 responses was obtained and analyzed using structural equation modeling. Findings suggested that emotional value, perceived marketplace influence, subjective norm, and attitude are key predictors of consumers' green purchase intention. Incorporating psychological factors such as economic value, emotional value, and perceived marketplace influence in the TPB model increased the predictive power for intentions to adopt green products. This study explores the relationship between perceived marketplace influence and attitude towards purchasing green products by demonstrating that one's impression of influence over others' marketplace behaviour has a considerable impact on one's marketplace behaviour. When consumers believe

The interplay of emotional value, trend affinity and past practices in sustainable consumption: an application of theory of reciprocal determinism

Yatish Joshi [a], Rambalak Yadav [b] and Amit Shankar [c]

[a] Motilal Nehru National Institute of Technology Allahabad, Allahabad, India; [b] Institute of Management Technology, Hyderabad, India; [c] Indian Institute of Management Visakhapatnam, Visakhapatnam, India

ABSTRACT

This study aims to examine the role of trend affinity, emotional value, and past sustainable practices on consumers' sustainable consumption behaviour. The research employed a survey approach to collect responses; 282 usable responses were received. Results established trend affinity, emotional value, and supportive behaviour towards environmental organisations as significant determinants of individuals' sustainable consumption practices. Using Theory of Reciprocal Determinism (TRD) framework and integrating personal, behavioural and social factors, the study provides a novel perspective to understand sustainable consumption behaviour. Policymakers and practitioners can use the outcome of the study to promote sustainable consumption behaviour among individuals to minimise damage to the environment.

Does gamified interaction build a strong consumer-brand connection? A study of mobile applications

Deepak Sangroya
Jindal Global Business School, OP Jindal Global University, Sonipat, India

Rambalak Yadav
Institute of Management Technology, Hyderabad, India
rbyadav1988@gmail.com

Yatish Joshi
School of Management Studies, Motilal Nehru National Institute of Technology Allahabad, India

Abstract

In recent times gamification has increasingly been used by brands through smartphones to interact effectively with their consumers. The core assumption for creating gamified environment is that it will develop engagement with the consumer and motivate them to use their product or services. However, beyond this assumption, there is dearth empirical evidence regarding how much effective these gamified features are in engaging consumers. Therefore, this research analyses the relationship between flow, brand engagement, self-brand connection and brand usage intent among consumers (N = 360) of two gamified mobile applications. The findings show that the multidimensional construct flow formed by five dimensions i.e. challenge, feedback, autonomy, immersion, and interaction positively associates with cognitive brand engagement and emotional brand engagement. Additionally, both these forms of brand engagement further strengthen consumers' brand connection and motivate them for further use. These results imply that gamified environment can augment consumer engagement with brand and further increase usage intention. Therefore, gamification can be an effective technique in brand management and brand managers can use it to strengthen relationship with consumers and increasing possibility of using their brands.
